

1. Import "heros_information" dataset from <https://www.kaggle.com/claودیodavi/superhero-set>
2. How many male characters that have blue eyes are there?
3. Remove bad alignment and answer Q2 again.
4. What is the most common race and skin color? Create a summary table.
5. Find out the mean and standard deviation of height and weight. Find the tallest and shortest heroes.
6. Create tibbles showing weight and height for good and bad Marvel heros. Compare their mean and standard deviation weight and height.
7. Import "super_hero_powers" dataset from <https://www.kaggle.com/claودیodavi/superhero-set> Combine powers and information datasets. Give 10 point to each power that is TRUE. Compute the power of each superhero. Write a dplyr chain to plot power of female human heros and show differences for alignment.
